

## Insights from Americans 65+ on Influenza and Prevention

*Influenza can be severe and even life-threatening for older adults due to their weakened immune systems, and is especially dangerous for people with chronic conditions like heart disease and diabetes.<sup>1,2,3</sup> A recent survey – conducted in support of the Flu + You campaign educating older adults and those who care for them about the seriousness of the flu and the importance of prevention – found that many adults 65 years of age and older underestimate the seriousness of the flu and are largely unaware of their vaccine options.<sup>4,5</sup>*

### Flu Hits Older Adults the Hardest, Yet Many Underestimate the Seriousness of the Flu

- The 2014-2015 flu season recorded the highest hospitalization rates among people 65 years of age and older in recent history.<sup>6</sup>
- **82%** are not extremely confident in their knowledge of the age-related decline of the immune system as it relates to the flu.<sup>5</sup>
- **Only 13%** of seniors are extremely confident in their knowledge of possible flu complications.<sup>5</sup>

### This Is Especially True for Adults with Chronic Conditions, Yet Many Seniors Are Unaware of the Link Between the Flu and Chronic Conditions

- **Up to 80%** of adults hospitalized from flu complications in past flu seasons had a chronic health condition.<sup>7</sup>
  - **About one third** of people 65 years of age and older are unaware that someone with chronic conditions like heart disease or diabetes would be at risk for complications from the flu.<sup>5</sup>

### Many Older Adults Get Vaccinated Against the Flu Every Year and Follow Their Health Care Professionals' Recommendations

- **71%** of older adults reported getting an annual flu shot to help maintain their health.<sup>5</sup>
- Health care professionals influence their patients' decisions related to flu vaccination.<sup>5</sup>
  - **62%** got a flu shot in the past because their physician recommended it.<sup>5</sup>
  - **57%** are more likely to get a flu shot if their doctor recommended it because of their age.<sup>5</sup>
  - **41%** got the type of flu shot they did because it was recommended by their physician.<sup>5</sup>

### However, Many Seniors Are Unaware of Their Flu Vaccine Options

- **65%** think most flu shots are appropriate for all age groups.<sup>5</sup>
- **50%** are not confident in their knowledge of different types of flu shots.<sup>5</sup>

### Further Education and Resources Are Needed When It Comes to the Flu

- **Only 8%** of survey respondents are concerned about getting the flu despite seniors' high hospitalization rates.<sup>5,8</sup>
  - This highlights the need for further education about the seriousness of the flu.
- **88%** of older adults take a proactive approach to their health; however, about as many are not confident in their knowledge of the flu and where to get flu information.<sup>5</sup>
  - **82%** are not extremely confident in their knowledge of resources for information about the flu.<sup>5</sup>
